# REPORT

Asumptions:

- The one assumption I made in this assignment is that it won't take much time release a lock so that I could print every time in the critical section

Graphs:

Graph1:

Graph2:

Analaysis:

The graph depict theroy as expected the bounded cas should have less worst waitng times but at a cost of having higer average waiting time because the process cannot wait more than 5 process to capture the lock

And one cannot depict direct relation ship between tas and cas this was clearley depicted based on graphs
